San Jose, Occidental Mindoro, Philippines 5100 | Pembo, Taguig, Philippines 1642

Cloud and DevOps-focused junior engineer with IT support experience and hands-on exposure to AWS EC2 through real-world projects and bootcamp training. Built and deployed full-stack applications using Docker, GitHub Actions CI/CD, and Terraform in learning environments. Experienced in system troubleshooting, basic cloud operations, and application deployment workflows. Actively developing skills in infrastructure automation, containerization, and cloud-native DevOps practices.

WORK EXPERIENCE

Phitopolis International
Corp.

January 2026 – Present

DevOps Engineer - Trading & Platform Ops

- Supported mission-critical electronic trading platforms across Equities, Futures, and FX markets for APAC and European regions
- Monitored trading systems and ensured operational readiness before market open
- Managed and monitored Apache Airflow workflows, investigating failures and ensuring successful execution of critical data-processing jobs
- Investigated infrastructure alerts using Icinga, including CPU, memory, disk usage, SSH, and application health issues, both for On-Premise and AWS servers
- Monitored and troubleshooted Kafka services, addressing lag and performance issues
- Performed Linux server administration including log analysis, service restarts, and system health validation
- Managed Active Directory user provisioning and access control (onboarding/offboarding processes)
- Collaborated with Trading, DataOps, and engineering teams to ensure system stability and data delivery
- Participated in incident management, escalation handling, and production troubleshooting in a 24/7 environment

Ingram Micro

June 2023 – March 2025

Associate III, Technical Support

- Delivered Tier 1–2 technical support for V7 hardware across NA/EU, resolving issues via root cause analysis to meet SLA targets.
- Troubleshooted incidents involving monitors, peripherals, UPS, racks, and interactive displays.
- Managed RMA workflows in SAP, reducing replacement turnaround time.
- Authored knowledge base articles to improve first-call resolution rates.
- Collaborated with cross-functional teams to align support with business goals.

Ingram Micro

September 2020 – June 2023

Associate III, Pre-sales Solution Design

- Designed scalable IT solutions tailored to business requirements.
- Provided recommendations for multi-vendor hardware and peripherals (Lenovo, HP, Dell, Microsoft, Samsung, Acer, Asus, MSI).
- Optimized system builds with hardware upgrades (memory/storage/NICs/GPUs) to improve performance and reliability.
- Produced BOMs, and quotes to support deployment projects.
- Collaborated with networking, security, and server teams on integrated architectures.

Gruppo EMS/ERTI
September 2015 - Mar 2020

Technician II - Test Systems Equipment

- Operated and maintained automated test systems (CTS, Teradyne Flex, Harris & Tuvey, National Instruments) for production quality.
- Implemented preventative maintenance schedules to reduce downtime.
- Conducted final device testing and quality checks to meet compliance standards.
- Trained and mentored junior technicians on maintenance and testing best practices.
- Maintained documentation for audits, traceability, and process improvement.

EDUCATION

Philippine Coding Camp **DevOps Bootcamp**
April 2025 - July 2025

Batangas State University **Bachelor of Industrial Technology - Major in Electrical Technology**
- TNEU
2010 - 2015

- With Diploma in Technician Course in Electrical Technology

TECHNICAL SKILLS

Cloud & DevOps

- AWS EC2
- AWS S3 (Project Experience)
- AWS IAM (Project Experience)
- AWS VPC (Project Experience)
- Docker
- Git & GitHub
- GitHub Actions
- Terraform (Project Experience)
- Jenkins (Foundational Knowledge)
- Kubernetes (Foundational Knowledge)
- Ansible (Foundational Knowledge)

Platform Operations & Monitoring

- Linux Administration
- Apache Airflow
- Kafka
- Icinga
- Incident Management
- Production Support
- System Monitoring & Troubleshooting

Programming & Scripting

- Bash
- Python

Databases

- MongoDB
- MySQL

Systems & Tools

- MS Office 365
- Google Workspace
- SAP
- Vagrant

Technical Support:

- Desktop & Laptop Support
- Hardware Troubleshooting
- UPS, Charging Carts & Rack Systems
- Peripherals, Displays & Interactive Monitors

PROJECTS

Portfolio: <https://marcsman007.github.io/web-portfolio/>

MERN Car Rental App with CI/CD on AWS

- Built and deployed a full-stack MERN web application on AWS EC2 using Docker containers.
- Integrated GitHub Actions for automated CI/CD pipeline deployments.

Cloud Monitoring Stack

- Set up Prometheus and Grafana to monitor server metrics (CPU, memory, uptime).

Infrastructure Automation with Terraform

- Automated provisioning of AWS VPC, subnets, EC2 instances, and S3 buckets using Terraform.
- Applied Infrastructure-as-Code principles for repeatable and scalable deployments.

Automation Scripts

- Created scripts for AWS resource cleanup, log parsing, and daily health checks.
 - Reduced manual maintenance time and improved consistency in repetitive tasks.
